

From Enterprise Reporting to Business Intelligence for your IFS Application

Brought to you by

eNSYNC

BUSINESS OBJECTS®

Today's economic climate depends on being able to securely tap the wealth of information in your IFS application easily and quickly. **Empower end-users** with access to information easily creating reports and dashboards. Add key performance indicators and business exceptions to take immediate action.

With our package powered by Business Objects we've built for your IFS application an out-of-the-box information (drag/drop) reporting and business intelligence tool. Our Quickstart implementation practice provides on-site training using your own data for immediate ROI – return on intelligence.

Please join our scheduled demonstration or ask about a private demonstration. See how we easily we

- Provide a reporting solution for end-users that create their own queries, reports, and charts/graphs
- Create KPI dashboards with slice, dice, drilldown, and alert capabilities
- Dynamically integrate data from all of your enterprise data sources for a total enterprise reporting and business intelligence solution

See how you can deploy enterprise reporting and business intelligence - from your desktop, web or your PDA. Want more? Call us for an on-site demonstration with your own data at your office.

Proven strategies to ...

- Understand how to securely deliver critical information to the right audiences.
- Closely monitor sales, partner, and customer performance to meet revenue, margin, and profit targets.
- Leverage a dashboard solution to get your organization focused on your most critical performance indicators.

eNSYNC Solutions, Inc. packages and successfully deploys Enterprise Reporting/Business Intelligence solutions for frontline workers to executive management. Our implementation experience with the IFS Application provides a unique, fast and very effective implementation that assures success!
