

eNSYNC: Your Certified IFS Partner

IT/DBA Admin Training for IFS Course Syllabus

Course Purpose

This course will give your IFS Systems Administrators the skills to manage and monitor your IFS infrastructure. Any IFS Systems Administrator on your staff would benefit from this class. Demonstrations and hand-on practice will reinforce the concepts you'll delve into in this course.

Course Description

This training starts with an introduction to the Oracle database architecture, objects, and management specific to IFS. After understanding how the database functions we go through the IFS Administrative tools and options. This class is tailored for your specific version of IFS and your IT infrastructure.

Training materials, manuals and documents are provided to the students as part of the classroom experience.

Course Dates and Location

Based on your staff's schedule and instructor availability.

The class is taught at your site. You get the benefit of monitoring and making changes to your own IFS infrastructure.

Or Email
training@ensyncsolutions.com

Course Objectives

After completing this course, participants should be able to handle most common administrative tasks related to the IFS Applications installation, such as creating new users, roles and assigning different security levels, managing profiles, creating custom objects, installing and configuring the Print Agent, and more.

Participants should also be able to make backups of their databases, copy/clone them, and know how to identify and resolve performance bottlenecks.

Student Prerequisites

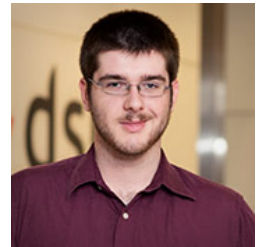

- Previous Systems Management experience.
- Basic knowledge of Microsoft Windows and IFS.
- The students must have Microsoft Domain account authority.

Instructor Contact Information

Instructor: **Randy Grasmick**
Email: randy.grasmick@dsiglobal.com
Phone number: **816.416.5689**

Instructor Background

Randy has over five years of both Oracle and IFS administration experience. He has developed an array of solutions for IFS customers to streamline reporting, integration with other applications and data migration. Randy is also a software architect and developer for eNSYNC IFS products and integrations.
